CLEVELAND STEEL & TUBES LTD

VALUE ENGINEERED SOLUTION

Buying surplus stock to fulfil your project requirements saves you money, time and carbon.

Our unrivalled volume of surplus stock enables customers to design projects with immediately available stock, often in close alternative sizes. This allows them to deliver their project on time whilst keeping material costs low.

Talk to us and find out more about how we can support your project.

Introduction

Established in 1973, we are one of the largest stockholders of steel tubes in Europe with approximately 100,000 tonnes of material held at our facility in North Yorkshire, UK.

We are proud to be founder members of the multinational Bianco Group, with associate companies worldwide. This means you have access to over 250,000 tonnes of material held in stock.

Our business is based on supplying our customers with steel tubes that meet their requirements at highly competitive prices. Depending on the source and conditions of purchase, our stock is divided into two broad categories, Uncertified (Non Prime) and Certified.

Uncertified (Non Prime) - page 14 **Certified - page 35**

Please note this stock list now lists all products by outside diameter (OD mm) and the different certified grades are listed in the end column. Our stock profile includes 45% of certified material, complementing our more cost-effective uncertified material, which can always be issued with independent test reports based on your needs.

Sustainability in steel reuse

We are committed to working with our clients to offer a sustainable solution. Our business model has synergies with the circular economy principles, offering our clients full benefits associated with the reuse of unused and surplus material.

- **Big Carbon Savings – Up To 96% carbon savings** can be demonstrated when you opt to use surplus steel. You can download the LCA research from our website. We can contribute towards the reduction of the carbon impact of your project. The majority of our pipe is sourced from oil field surplus production. Re-purposing this pipe offers your project a reduced carbon footprint, which can be incorporated within the BREEAM/LEED assessment for large scope projects.
- **Reduced Lead Times** – We understand the urgency at times to obtain material quickly. With this in mind we hold 100,000 tonnes in stock at our facility in North Yorkshire and offer a full range of services to provide a finished item.
- **Reduced Material Costs** – Surplus pipe is available at highly competitive prices compared to certified pipe. This offers our clients a cost effective engineering solution.
- **Reuse of steel has significant carbon savings versus new production.**

50 years of global distribution

**HIGHLY
EXPERIENCED
EXPORT TEAMS**

Highly experienced exports teams continue to supply customers and their projects in:

Angola | Antarctica | Australia | Austria | Belgium | Canada | Colombia | Cyprus | Czech Republic | Denmark | Falkland Islands | Finland | France | Germany | Gibraltar | Greece | Holland | Hong Kong | Hungary | India | Israel | Italy | Malta | Mauritius | Mexico | Morocco | Namibia | Nigeria | Norway | Panama | Poland | Portugal | Romania | Sierra Leone | Singapore | Slovenia | Spain | Sweden | Switzerland | Turkey | USA | West Indies

Bespoke services

Our on-site services include: cutting, welding and fabrication, shot blasting, painting, worldwide logistics and storage facilities.

Whilst our stock is kept in random lengths, generally from 4.5m up to about 15m, you have the option of having shorter lengths or extended with circumferential welds.

Cutting – We currently operate **5 automatic band saws**. Following recent investment in a new saw, we can now saw cut tubes up to **1280mm OD**, and we can flame cut tubes up to **2500mm OD**. Our standard saw cutting tolerances are **+/-3mm** up to **762mm OD**, and **+/-5mm** up to **1280mm**. For flame cutting **0/+15mm**. These are our standard tolerances, it is possible to have closer tolerances across our range by prior agreement.

Welding and fabrication – Employing fully coded, highly experienced welders, we routinely produce and deliver extended lengths up to **30m** long. We have produced lengths exceeding **50m** in the past. Copies of our procedures are available on request or we may be able to work to your procedures by special arrangement.

Testing – If you need confirmation of the properties of any of our material, we can always provide certification by independent testing and analysis before despatch.

Shot blasting and coating – We have two automatic shot blasting machines with up to **1m diameter** capacity. Larger sizes can be manually blasted if required. Our paint spraying capabilities give you the option of having your orders shot blasted and coated before they leave our works. We hold stocks of the most commonly specified paints.

Traceability – Although mill certificates are not available with uncertified products, you may want to know some of the properties of our material. Through our unique pipe numbering system, all of our stock can be traced to source. We record all details our suppliers give to us and can often pass this data on to you but without warranty.

Please note for testing we use UKAS approved independent laboratories. If customers require third party inspection and validation we will be pleased to help you arrange it.

Our terms of business

Payment terms

For customers who buy regularly, we offer monthly credit terms, subject to satisfactory checks and conditions. You can download an application form from our website as well as find our terms and conditions. Alternatively payment can be made by either credit or debit cards, or by bank transfer.

Order charge

Please note, we operate a minimum order of £500.00 per size ordered ex works from our Dalton site.

Transport

You can choose the best transport method to suit your requirement ranging from an economical part-load delivery when we are next in your area or next day delivery on dedicated trucks when time is of the essence.

Collection

You can save carriage collecting your orders from our works which are open: **Monday to Thursday 08:00 to 16:00 and Friday 08:00 to 14:00.**

We will continue to service our customers and have implemented a number of on-site procedures to protect our workforce and visiting drivers.

Delivering steel tube nationwide for 50 years

55,000
TONNES OF UNCERTIFIED STOCK
IN THIS SECTION!

Uncertified

Uncertified material does not have the benefits of mill certification to qualify the properties.

This information can be provided by independent testing if necessary and at an additional cost.

If you are keen to work with a supplier to create value engineering, we are here to discuss options and the suitability of our range of pipes can offer. Consideration of this material can allow you to significantly reduce costs compared to traditional Certified supplies and it will show your commitment in creating economic, environmental and social value.

Our Uncertified range includes mills' over-rollings and second quality material together with unused surplus stock from completed projects and redundant stock where certification may have existed but where traceability is no longer available.

WE BUY SURPLUS STEEL TUBE STOCK

CST has 50 years experience of successfully sourcing material from across the globe.

Speak directly with our purchasing manager:

steve@cleveland-steel.com

+44 (0) 1845 577789

Certified

Our Certified or Prime stock is material we have purchased complete with the producer's test certification.

This material is typically purchased directly from the steel producers or from sources that can provide traceability between the material and the certification supplied.

Mill certificates will confirm the chemical analysis and mechanical properties of the material, depending on the specification to which the product was originally manufactured – not all properties are shown on mill certification. However, we are able to arrange for supplementary independent testing to show any additional requirements you may need to know.

Comparison guide

A general comparison guide: API 5L steel grades vs Euronorm structural steel grades.

American (API) Specifications

API Grades	Yield	Tensile	BS/EN Grades
Gr. B	241	413	S235
X42	289	413	S275
X46	317	434	
X52	359	455	S355
X56	386	489	
X60	413	517	S420
X65	448	531	S460
X70	482	565	
X80	551	620	

European (BS/EN) Specifications

BS/EN Grades	Yield	Tensile	API Grades
S185	175	290	
S235	225	340	Gr. B
S275	265	410	X42
S355	345	490	X52
S420	400	520	X60
S460	440	550	X65

In general the API 5L grades listed tend to have chemical analysis and mechanical property requirements that are equal to or better than the minimum requirements of the comparable Euronorm structural steel grades shown. **Independent Tests carried out by a UKAS approved laboratory can verify this.**
